July 1956

**WEIGH-A-DAY-A-MONTH DAIRY RECORD PLAN
A NEW PLAN IN THE
NATIONAL COOPERATIVE DAIRY HERD IMPROVEMENT PROGRAM**

A new plan of record-keeping, the Weigh-a-Day-a-Month Dairy Record Plan, is being introduced as a part of the National Cooperative Dairy Herd Improvement Program.

The plan was developed to meet the need of a low-cost record-keeping system for the estimated 90 percent of dairy farms having herds of 14 cows or less. This plan will supplement as well as complement the Dairy Herd Improvement Association Plan of record-keeping under which 1,400,000 cows are being tested for milk and butterfat production and the Owner-Sampler Plan under which some 375,000 cows are also being tested.

The important features of the Weigh-a-Day-a-Month Plan are its simplicity; its adaptability to all herds, small and large; and its low cost. The plan provides the participating dairyman with adequate milk production information on each of his cows to help him improve the efficiency and profitableness of his herd. It will provide information to guide him in:

1. Culling low-producing unprofitable cows for increasing herd profits.
2. Feeding according to production to save money.
3. Selecting the best cows from which to raise herd replacements.

How the Plan Operates:

The Dairy Farmer enrolls in the Weigh-a-Day-a-Month Plan and gets instructions from the county agricultural agent. The dairy farmer agrees:

- (a) To pay in advance a year's fee for record-keeping on his herd (approximate cost, about 5 cents per cow per month). The fees are used to defray costs of calculating the records and mailing charges.
- (b) To provide a milk scales and a record book cover.
- (c) To weigh the milk of each cow in his herd - morning and night - on the 15th of each month, record these weights on the forms provided, and mail the forms to the county agent's office or a designated computing service where the records are calculated.

The County Agent's Office, in cooperation with the local dairy planning committees, develops the Weigh-a-Day-a-Month Plan of record-keeping in his county and carries forward the necessary educational work to place the plan in effect and to supervise its progress. He arranges for a computing service to do the work of calculating the records and providing the information for the dairy farmers. The computing service:

- (a) Receives the monthly record form from the dairy farmer.
- (b) Calculates the monthly milk yield and the yield-to-date for the year for each cow in the herd and a monthly herd average.
- (c) Returns the calculated records to the herd owner, together with a form for the next month's recording.
- (d) Provides a yearly summary of the production of each cow and the herd at the close of the recording year. (Detailed instructions for calculating the records are provided. The suggested fees are adequate to pay satisfactory clerk-hour wage rates to have the records calculated manually.)

The State Extension Dairyman supervises the program in the State, distributes all necessary forms and printed supplies to county agents with suggestions for operating the plan, and makes State summaries of the progress of the program.

The U. S. Department of Agriculture provides the record-keeping forms and instructions needed in the operation of the plan and makes national summaries on an annual basis of the progress of the program.

The Weigh-a-Day-a-Month Plan will go into operation this fall. Record-keeping forms, program material, and instructions to dairymen and to computing services are now being prepared. All Weigh-a-Day-a-Month material will, within the next few weeks, be distributed to county agricultural agents through the offices of the State Extension Dairymen. It is believed the plan will add greatly to the number of dairy cows on which production records will be kept and will result in a better understanding among more dairy farmers of the advantages to be gained by record-keeping, especially those who maintain small herds.

CORRECTION: In last month's DHIA Letter new and revised DHIA Rules were listed. The first report received of the American Dairy Science Association change in rules was in error. Rule 6 was not revised as indicated and remains unchanged.

DHIA PROVED-SIRE RECORDS TABULATED IN JUNE 1956

Following is a list of 359 sires whose records were tabulated or retabulated by the Dairy Husbandry Research Branch in June 1956. Production records used in proving DHIA sires consist of 305-day lactation records standardized to a mature equivalent twice-a-day milking basis.

An asterisk at the end of a sire's registration number indicates a retabulated record. The asterisk may be followed by any number from 1 through 15 (i. e., *12) to indicate in which of the 15 printed lists his previous record appeared. Or the asterisk may be followed by the month and year (i. e., *May 51) of the DHIA letter in which his previous record appeared. Two asterisks following the sire's registration number, or following reference to a previous listing, indicate that the proved-sire tabulation or retabulation was requested by one of the States.

In case records from more than one herd were used, the reference is to the herd from which production records for the largest number of the sire's youngest daughters were reported. If the sire has been used in an artificial-breeding association, the name of the association is given.

Proved-sire records consisting of fewer than 10 comparisons are indicated as "preliminary proofs" because these records may be significantly changed when additional comparisons become available and are included in the proved-sire records.

Proved-sire records consisting of fewer than 25 comparisons with daughters resulting from artificial breeding are indicated as "preliminary AB proofs" because these records may be significantly changed when additional comparisons become available and are included in the proved-sire records.

To make the most intelligent selection of a sire, the dairyman should use these proved-sire records to single out the most promising sire and then make every effort to supplement these data with additional information gathered from the herds in which the dams and daughters made their records. Particular attention should be given to the feeding practices and environmental conditions under which the records were made, in order to be assured that the records of the daughters were not made under more favorable conditions than those of the dams or vice versa. It is especially important to determine that there has been no selection of daughters in making the comparison.
